

- 1.) In Power BI, use the FILTER() function to create a measure that counts the number of products in a Flipkart-style sales dataset where the rating is greater than 4.

ANSWERS:

- 2.) Build a calculated measure using CALCULATE() and ALL() to show the overall average order value for all users in a Zomato orders dataset, ignoring any filters on city or cuisine.

ANSWERS:

- 3.) Create a RANKX measure that ranks movies by total box office collection in a BookMyShow-style dataset and displays the rank next to each movie title.

ANSWERS:

Movie_Title	movies_collection_total	Rank_by_title
Animal	913	4
Baahubali 2	535	11
Bhool Bhulaiyaa 3	843	5
Dangal	1078	1
Gadar 2	483	13
Jawan	689	8
Kalki 2898 AD	713	6
KGF Chapter 2	554	10
Pathaan	504	12
Pushpa 2: The Rule	557	9
RRR	436	14
Sanju	388	15
Singham Again	692	7
Stree 2	1046	2
Tiger 3	1000	3
Total	10431	1

- 4.) Use the SUMX() function to calculate the total value of items in a Myntra shopping cart table, where each item has a quantity and price column.

Hint: SUMX() lets you multiply quantity by price for each row and then sum the results.

ANSWERS:

Category	cart_tbl
Footwear	33263
Apparel	30366
Accessories	13828
Total	77457

5.) With AVERAGEX(), build a measure that calculates the average rating per restaurant in a restaurant reviews table, and display it in a table visual in Power BI.

ANSWERS:

Restaurant_Name	avg_rating_per_resturant
Paradise Biryani	4.50
Truffles	4.40
Glen's Bakehouse	4.14
Barbeque Nation	4.00
Toit	3.83
Empire Restaurant	3.57
Social	3.14
Total	3.88
