

1.) Import a CSV file of Zomato restaurant listings into Power BI and use the 'Split Column by Delimiter' feature to separate the 'Restaurant Name - Area' column into two columns: 'Restaurant Name' and 'Area'.

ANSWERS:

| ABC RestaurantName | ABC Area      |
|--------------------|---------------|
| Spice Garden       | Navrangpura   |
| Pizza Hub          | Satellite     |
| Burger Point       | Vastrapur     |
| Royal Dine         | Bopal         |
| Green Bowl         | Maninagar     |
| Tandoori Nights    | Paldi         |
| Sushi World        | Thaltej       |
| Cafe Aroma         | SG Highway    |
| Ocean View         | Naranpura     |
| Urban Kitchen      | Prahlad Nagar |

2.) Use the 'Merge Columns' feature in Power BI to combine 'First Name' and 'Last Name' columns from a Flipkart user data table into a single 'Full Name' column, separated by a space.

ANSWERS:

|    | ABC 123 firstname | ABC 123 Lastname | ABC Fullname  |
|----|-------------------|------------------|---------------|
| 1  | Amit              | Shah             | Shah Amit     |
| 2  | Priya             | Patel            | Patel Priya   |
| 3  | Rahul             | Mehta            | Mehta Rahul   |
| 4  | Neha              | Joshi            | Joshi Neha    |
| 5  | Vikas             | Desai            | Desai Vikas   |
| 6  | Pooja             | Trivedi          | Trivedi Pooja |
| 7  | Rohit             | Kapoor           | Kapoor Rohit  |
| 8  | Sneha             | Sharma           | Sharma Sneha  |
| 9  | Karan             | Gupta            | Gupta Karan   |
| 10 | Anjali            | Verma            | Verma Anjali  |
| 11 | Rakesh            | Singh            | Singh Rakesh  |
| 12 | Komal             | Yadav            | Yadav Komal   |
| 13 | Arjun             | Mishra           | Mishra Arjun  |
| 14 | Nisha             | Agarwal          | Agarwal Nisha |
| 15 | Deepak            | Jain             | Jain Deepak   |

3.) Replace all instances of the value 'Cancelled' with 'Order Failed' in the 'Order Status' column of a Swiggy orders dataset using Power BI's 'Replace Values' function.

ANSWERS:

| ABC Orderstatus |
|-----------------|
| pending         |
| done            |
| Order Failed    |
| pending         |
| done            |
| Order Failed    |
| pending         |
| done            |
| Order Failed    |
| pending         |

4.) Change the data type of the 'Order Amount' column from Text to Decimal Number in a Paytm transaction table in Power BI, and verify that the column now supports numerical calculations

ANSWERS:

| 1.2 OrderAmount |
|-----------------|
| 800             |
| 1200            |
| 500             |
| 1500            |
| 700             |
| 1000            |
| 1800            |
| 600             |
| 2000            |
| 1300            |

5.) In a Movie Ticket Booking dataset (like BookMyShow), use the 'Fill Down' operation in Power BI to fill missing 'Movie Name' values based on the previous row's value.

Hint Blank rows for 'Movie Name' should inherit the name from the last non-blank entry above.

ANSWERS:

BEFORE:

|    | AB <sub>C</sub> Booking ID | AB <sub>C</sub> Movie Name          |
|----|----------------------------|-------------------------------------|
| 1  | BMS-1001                   | Animal                              |
| 2  | BMS-1002                   | Spider-Man: Across the Spider-Verse |
| 3  | BMS-1003                   | Jawan                               |
| 4  | BMS-1004                   | Past Lives                          |
| 5  | BMS-1005                   | Past Lives                          |
| 6  | BMS-1006                   | <i>null</i>                         |
| 7  | BMS-1007                   | Interstellar (Re-release)           |
| 8  | BMS-1008                   | <i>null</i>                         |
